REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

While the prior art teaches to control tensile or compressive stress of an underlying source or drain by means of an overlying insulating layer (as in 7,109,568), no teaching was found of an insulating layer increasing or reducing surface tension of an underlying source or drain, as required by each of the independent claims. "Surface tension" is understood to mean its usual dictionary definition (as in Hawley's or American Heritage dictionaries as cited), which refers to the unbalanced molecular cohesive forces exerted at a surface by the underlying material, when the material is in a liquid, or melted, state. Li, 7,118,942, states at column 23, lines 40-41, that the force can be atomic, as well as molecular. Konishi et al. states at column 48, line 37, that the term "surface tension" can be used for interfaces, as well as surfaces. Yeh et al. teaches a prior art use of surface tension to control semiconductor properties.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.

The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
